Figure 1 displays a 6x6 grid of 36 panels, each showing the effect of different combinations of Dose (D), Sex (S), and Age (A) on the proportion of positive results (P). The rows represent Dose (0.1, 0.2, 0.3, 0.4, 0.5, 0.6) and the columns represent Sex (M, F) and Age (1, 2, 3, 4, 5, 6). Each panel shows a bar chart with the proportion of positive results on the y-axis (0 to 1) and the proportion of positive results on the x-axis (0 to 1). The bars are labeled with 'P' and 'D'.
